#13Replace testing

1. Remove text from Input area (Cmd+A and Cmd+X) and push button Replace. Message will pop up.
2. Input something in Find area and push button Replace (while Input area is still empty), other message will pop up.
3. Remove text from Find area and input back the text in Input area (Cmd+V). Push button Replace to see the other warning message.
4. Input "hello" in Find area and "bonjour" in Replace area. Push button Replace. You will see updated text below the button. At the same time you can see that all additional spaces are deleted and all first letters after dots are capitalized and separated by spaces (for example, "bye.good." -> "Bye. Good.")
5. Input "o" in Find area and "." in Replace area. Push button Replace. You will see updated text below the button. All letters "o" are replaced by dots. You can see that all first letters after dots are capitalized and spaces are added after. For example, in the last world "good" we replaced two letters "o" by only one dot and space after it.
6. Input "t" in Find area and "." in Replace area. Push button Replace. You will see updated text below the button. All letters "t" are replaced by dots. You can see that all first letters after dots are capitalized and spaces are added after. Also, you can admit that if the word has last letter replaced by dot, you will not see two dots and two spaces, there will be one dot and one space. (for example, "best." -> "bes.")
